Histórico de cambios del proyecto:

Como podemos ver en la captura, no se han creado ramas para el primer Sprint, debido a la poca complejidad de las actividades.

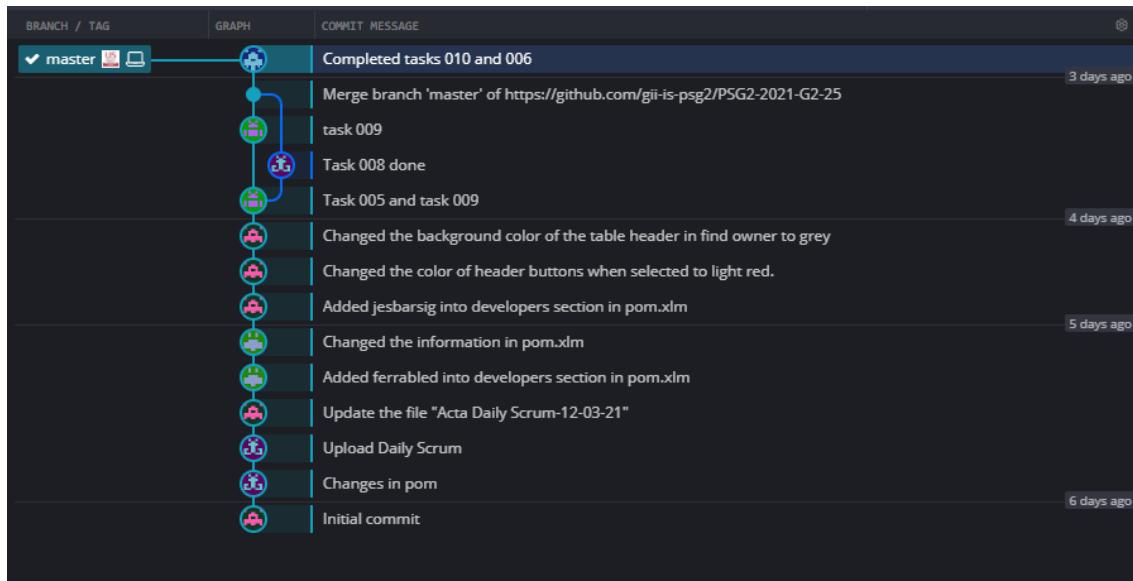

La siguiente imagen extraída de GitHub, muestra el histórico de commits realizados en el proyecto durante el primer Sprint:

The screenshot shows a detailed view of GitHub commits on the 'master' branch. The commits are organized by date, with each date group containing multiple individual commits. Each commit card includes the author's name, the commit message, the date it was made, and a copy icon, a link to the commit, and a diff icon.

- Commits on Mar 16, 2021:
 - Completed tasks 010 and 006

- Commits on Mar 13, 2021:
 - Changed the background color of the table header in find owner to grey
Jesusjbs committed 5 days ago
 - Changed the color of header buttons when selected to light red.
Jesusjbs committed 5 days ago
 - Added jesbarsig into developers section in pom.xml
Jesusjbs committed 5 days ago
- Commits on Mar 12, 2021:
 - Changed the information in pom.xml
ferrable committed 6 days ago
 - Added ferrable into developers section in pom.xml
ferrable committed 6 days ago
 - Update the file "Acta Daily Scrum-12-03-21"
Jesusjbs committed 6 days ago
 - Upload Daily Scrum
danic authored and danic committed 6 days ago
 - Changes in pom
danic authored and danic committed 6 days ago
- Commits on Mar 11, 2021:
 - Initial commit
Jesusjbs committed 7 days ago

1.- Captura commits vista desde GitHub

La siguiente captura proviene de la aplicación GitKraken, un control de versiones para Git con interfaz gráfica, en ella se puede ver de una manera más visual el trabajo realizado por cada miembro del equipo

2.- Captura commits vista desde GitKraken

Conflictos encontrados:

Al ser el primer Sprint, las tareas a realizar no tenían mucha dificultad y, por tanto, no se han encontrado conflictos durante su desarrollo.

Resolución de conflictos:

Al no haber existido ningún conflicto durante el desarrollo del Sprint, no se ha realizado ninguna resolución de estos.

Registros de Toggle:

4.- Registro de tiempo detallado

A2.E Extensión del documento

Ampliando el trabajo realizado anteriormente, la siguiente documentación corresponde desde el 17 de marzo hasta la fecha de entrega, el 5 de abril.

Historial de cambios del proyecto (actualización):

Esta vez, se ha utilizado varias ramas debido al uso de la metodología GitFlow. La siguiente imagen extraída de GitHub, muestra el histórico de commits realizados en el proyecto durante el primer Sprint:

The screenshot shows a GitHub commit history for the 'feature/13-pet-hotel' branch. A single commit is listed: 'Task 013 pet hotel functionality' by 'Jesusjbs' committed 15 days ago. The commit hash is 3767f4a. The interface includes standard GitHub commit controls (copy, view, diff).

5.- Commits en rama feature/13-pet-hotel

The screenshot shows a GitHub commit history for the 'feature/14-style' branch. A single commit is listed: 'Task 014 In review' by 'dancasnar1' committed 16 days ago. The commit hash is 1c350b1. The interface includes standard GitHub commit controls.

6.- Commits en rama feature/14-style

The screenshot shows a GitHub commit history for the 'feature/15-create-edit-vets' branch. It contains three commits: 'Task 015 - Finished task' by 'ferrabled' committed 3 days ago, 'Task 015 - Trying to fix Specialties' by 'ferrabled' committed 3 days ago, and 'Task 015 - New vet & editing' by 'ferrabled' committed 12 days ago. The commit hash for the first is 963328b, for the second is 45fe3e4, and for the third is a2e9423. The interface includes standard GitHub commit controls.

Ventajas y Desventajas de la estrategia de ramas

Ventajas

Las ventajas más notables que hemos obtenido al realizar esta estrategia de ramas han sido las siguientes:

Al tener una rama por feature, hemos podido trabajar sin problemas de solapamiento, que podríamos haber tenido en el caso de haber usado una estrategia distinta de ramas. Además, queda bien diferenciado a qué rama pertenece cada tarea.

En el caso de encontrarse algún error, podemos ir directamente a la rama creada de esa feature, y tratar de solucionar el error en la rama de la feature específica, sin necesidad de modificar una rama que contenga más elementos.

En el caso que una feature rompa la estabilidad de la API, con esta estrategia de ramificación podemos volver a una versión anterior de nuestro proyecto y empezar de nuevo otra vez con esa feature.

Nos permite seguir el flujo de trabajo del proyecto con mayor facilidad.

Desventajas

Las desventajas han sido mucho menores con respecto a las ventajas, por eso decidimos realizar esta estrategia de ramas. Las desventajas han sido las siguientes:

Algunas ramas, al tener dependencia directa de otras, se han tenido que mergear con la rama develop (previamente actualizada con otras ramas), ya que no podían finalizar completamente su tarea hasta tener el contenido de otras ramas “feature”. Por ejemplo, para terminar con la rama de “Feature / Task 017 - Translate” hemos tenido que terminar las demás features (siguiendo la definición de “Done” realizada por el equipo) y subir los cambios a la rama “develop” para después poder mergear estos nuevos cambios a la rama “Feature / Task 017 - Translate” y de esta manera poder traducir completamente las nuevas features añadidas, antes de hacer el merge (con las nuevas traducciones), hacia la rama “develop”.

Otra pequeña desventaja ha sido la necesidad de ser muy estrictos y seguir las pautas marcadas por la estrategia de ramificación, ya que hemos tenido que asegurar que todos los miembros siguen las pautas e incluso en algunos casos, corregir alguna mala práctica.
